National Management Measures to Control Nonpoint Source Pollution from Hydromodification U.S. Environmental Protection Agency

The Nation's aquatic resources are among its most valuable assets. Although environmental protection programs in the United States have improved water quality during the past 35 years, many challenges remain. Significant strides have been made in reducing the impacts of discrete pollutant sources, but some aquatic ecosystems remain impaired, due in part to complex pollution problems caused by nonpoint source (NPS) pollution. Of special concern are the problems in our streams, lakes, estuaries, aquifers, and other water bodies caused by runoff that is inadequately controlled or treated. These problems include changes in flow, increased sedimentation, higher water temperature, lower dissolved oxygen, degradation of aquatic habitat structure, loss of fish and other aquatic populations, and decreased water quality due to increased levels of nutrients, metals, hydrocarbons, bacteria, and other constituents. USEPA (1993) defines hydromodification as the "alteration of the hydrologic characteristics of coastal and non-coastal waters, which in turn could cause degradation of water resources." Examples of hydromodification in streams include dredging, straightening, and, in some cases, complete stream relocation. Other examples include construction in or along streams, construction and operation of dams and impoundments, channelization in streams, dredging, and land reclamation activities. Hydromodification can also include activities in streams that are being done to maintain the stream's integrity such as removing snags. Some indirect forms of hydromodification, such as erosion along streambanks or shorelines, are caused by the introduction or maintenance of structures in or adjacent to a waterbody and other activities, including many upland activities, that change the natural physical properties of the waterbody. EPA has grouped hydromodification activities into three categories: (1) channelization and channel modification, (2) dams, and (3) streambank and shoreline erosion.

From reader reviews:

Jose Callender:

Throughout other case, little men and women like to read book National Management Measures to Control Nonpoint Source Pollution from Hydromodification. You can choose the best book if you like reading a book. As long as we know about how is important any book National Management Measures to Control Nonpoint Source Pollution from Hydromodification. You can add understanding and of course you can around the world by just a book. Absolutely right, because from book you can understand everything! From your country until eventually foreign or abroad you will be known. About simple matter until wonderful thing you may know that. In this era, we can easily open a book or perhaps searching by internet unit. It is called e-book. You need to use it when you feel weary to go to the library. Let's examine.

David Goodspeed:

The book National Management Measures to Control Nonpoint Source Pollution from Hydromodification can give more knowledge and also the precise product information about everything you want. So just why must we leave a very important thing like a book National Management Measures to Control Nonpoint Source Pollution from Hydromodification? Some of you have a different opinion about publication. But one aim which book can give many facts for us. It is absolutely right. Right now, try to closer with your book. Knowledge or details that you take for that, it is possible to give for each other; you may share all of these. Book National Management Measures to Control Nonpoint Source Pollution from Hydromodification has simple shape however you know: it has great and massive function for you. You can search the enormous world by wide open and read a reserve. So it is very wonderful.

Nick Peoples:

The actual book National Management Measures to Control Nonpoint Source Pollution from Hydromodification has a lot associated with on it. So when you check out this book you can get a lot of help. The book was authored by the very famous author. This articles author makes some research previous to write this book. This book very easy to read you may get the point easily after perusing this book.

Lynn Groff:

You may spend your free time to learn this book this book. This National Management Measures to Control Nonpoint Source Pollution from Hydromodification is simple to create you can read it in the playground, in the beach, train and soon. If you did not include much space to bring typically the printed book, you can buy typically the e-book. It is make you quicker to read it. You can save typically the book in your smart phone. Thus there are a lot of benefits that you will get when one buys this book.
