Computational Colour Science Using MATLAB

Stephen Westland, Caterina Ripamonti, Vien Cheung

Computational Colour Science Using MATLAB Stephen Westland, Caterina Ripamonti, Vien Cheung *Computational Colour Science Using MATLAB 2nd Edition* offers a practical, problem-based approach to colour physics. The book focuses on the key issues encountered in modern colour engineering, including efficient representation of colour information, Fourier analysis of reflectance spectra and advanced colorimetric computation. Emphasis is placed on the practical applications rather than the techniques themselves, with material structured around key topics. These topics include colour calibration of visual displays, computer recipe prediction and models for colour-appearance prediction.

Each topic is carefully introduced at three levels to aid student understanding. First, theoretical ideas and background information are discussed, then explanations of mathematical solutions follow and finally practical solutions are presented using MATLAB. The content includes:

- A compendium of equations and numerical data required by the modern colour and imaging scientist.
- Numerous examples of solutions and algorithms for a wide-range of computational problems in colour science.
- Example scripts using the MATLAB programming language.

This 2nd edition contains substantial new and revised material, including three innovative chapters on colour imaging, psychophysical methods, and physiological colour spaces; the MATLAB toolbox has been extended with a professional, optimized, toolbox to go alongside the current teaching toolbox; and a java toolbox has been added which will interest users who are writing web applications and/or applets or mobile phone applications.

Computational Colour Science Using MATLAB 2nd Edition is an invaluable resource for students taking courses in colour science, colour chemistry and colour physics as well as technicians and researchers working in the area. In addition, it acts a useful reference for professionals and researchers working in colour dependent industries such as textiles, paints, print & electronic imaging.

Review from First Edition:

“...highly recommended as a concise introduction to the practicalities of colour science...” (Color Technology, 2004)

From reader reviews:

Deanna Reed:

Book will be written, printed, or created for everything. You can realize everything you want by a book. Book has a different type. As you may know that book is important matter to bring us around the world. Beside that you can your reading talent was fluently. A e-book Computational Colour Science Using MATLAB will make you to possibly be smarter. You can feel much more confidence if you can know about everything. But some of you think that open or reading a book make you bored. It is not necessarily make you fun. Why they may be thought like that? Have you looking for best book or appropriate book with you?

Omer Brown:

As people who live in typically the modest era should be update about what going on or data even knowledge to make them keep up with the era which can be always change and move ahead. Some of you maybe will probably update themselves by examining books. It is a good choice to suit your needs but the problems coming to anyone is you don't know what one you should start with. This Computational Colour Science Using MATLAB is our recommendation to cause you to keep up with the world. Why, because book serves what you want and want in this era.

Ethel Springer:

Typically the book Computational Colour Science Using MATLAB will bring one to the new experience of reading any book. The author style to explain the idea is very unique. In case you try to find new book to read, this book very suitable to you. The book Computational Colour Science Using MATLAB is much recommended to you to see. You can also get the e-book through the official web site, so you can more easily to read the book.

Shelia Sepulveda:

The book untitled Computational Colour Science Using MATLAB contain a lot of information on that. The writer explains the girl idea with easy approach. The language is very clear and understandable all the people, so do definitely not worry, you can easy to read it. The book was written by famous author. The author will bring you in the new era of literary works. You can read this book because you can read more your smart phone, or model, so you can read the book within anywhere and anytime. If you want to buy the e-book, you can start their official web-site along with order it. Have a nice study.
