Anti-personnel Landmine Detection for Humanitarian Demining: The Current Situation and Future Direction for Japanese Research and Development

Anti-personnel Landmine Detection for Humanitarian Demining: The Current Situation and Future Direction for Japanese Research and Development

Anti-personnel Landmine Detection for Humanitarian Demining reports on state-of-the-art technologies developed during a Japanese National Research Project (2002–2007). The conventional method of landmine detection is using metal detectors to sense the metal in mines, but often other metal fragments in minefields camouflage landmines and hinder progress using this form of demining. The challenge is to develop detection systems that can discriminate between AP landmines and random metal fragments.

The JST adopted research proposals and the results are reported here. This book concentrates on aspects of three approaches to AP mine detection: enhancing and confirming the results of metal-detection scans using GPR; using robot vehicles and manipulators to operate within minefields remotely; and methods of sensing the explosives within mines.

Results are presented in the fields of GPR, nuclear quadrupole resonance, neutron thermal analysis and biosensors. The integration of these methods for workable robot operation is demonstrated. The project was carried out in conjunction with mine action centers in Croatia, Cambodia and Afghanistan. Evaluation data from field trials are also given.

From reader reviews:

Davis Miller:

In this 21st hundred years, people become competitive in most way. By being competitive now, people have do something to make these survives, being in the middle of typically the crowded place and notice through surrounding. One thing that oftentimes many people have underestimated that for a while is reading. Yes, by reading a guide your ability to survive boost then having chance to remain than other is high. For you personally who want to start reading any book, we give you this kind of Anti-personnel Landmine Detection for Humanitarian Demining: The Current Situation and Future Direction for Japanese Research and Development book as nice and daily reading publication. Why, because this book is usually more than just a book.

Robin Castillo:

Hey guys, do you really wants to finds a new book to read? May be the book with the subject Anti-personnel Landmine Detection for Humanitarian Demining: The Current Situation and Future Direction for Japanese Research and Development suitable to you? Typically the book was written by famous writer in this era. Typically the book untitled Anti-personnel Landmine Detection for Humanitarian Demining: The Current Situation and Future Direction for Japanese Research and Development is the main of several books that everyone read now. This particular book was inspired many people in the world. When you read this publication you will enter the new age that you ever know before. The author explained their thought in the simple way, therefore all of people can easily to know the core of this guide. This book will give you a wide range of information about this world now. In order to see the represented of the world in this book.

Ruth Vigue:

Don't be worry in case you are afraid that this book will filled the space in your house, you may have it in e-book way, more simple and reachable. This specific Anti-personnel Landmine Detection for Humanitarian Demining: The Current Situation and Future Direction for Japanese Research and Development can give you a lot of good friends because by you looking at this one book you have point that they don't and make anyone more like an interesting person. This specific book can be one of a step for you to get success. This e-book offer you information that probably your friend doesn't understand, by knowing more than different make you to be great individuals. So , why hesitate? Let's have Anti-personnel Landmine Detection for Humanitarian Demining: The Current Situation and Future Direction for Japanese Research and Development.

Maria Peterson:

As we know that book is essential thing to add our information for everything. By a publication we can know everything we want. A book is a group of written, printed, illustrated or perhaps blank sheet. Every year was exactly added. This reserve Anti-personnel Landmine Detection for Humanitarian Demining: The Current

Situation and Future Direction for Japanese Research and Development was filled in relation to science. Spend your free time to add your knowledge about your scientific disciplines competence. Some people has distinct feel when they reading any book. If you know how big good thing about a book, you can feel enjoy to read a book. In the modern era like right now, many ways to get book that you simply wanted.
