Photocatalysis

Photocatalysis

This book gives a comprehensive treatment of photocatalysis, a topic of increasing importance due to its essential role in many of today's environmental and energy-source problems. The first part presents a brief introduction to the principles and fundamental aspects of photocatalysis including photoelectric chemical semiconductors. Part II describes applications to environmental cleaning, such as water purification and cleaning of the atmosphere. Part III discusses applications to photoenergy conversion, for example water decomposition with TiO₂, semiconductors and metal complexes. Serving as a timely and convenient reference source including exciting new advances, the book will appeal to academic and industrial researchers as well graduate and advanced undergraduate students.
