The Newall system is based on a hole "basis," which means that all holes are produced as near the standard size as commercially possible and the allowances are made in the shaft or other fitting. The first part of the table shows the tolerances allowable in a standard hole for two grades of work which are designated by classes A and B. The remainder of the table covers fits of various classes. Table 6--The Newaix Standard Tables of Allowances for Various Classes of Fits in Millimeters Tolerances in Standard Holes for Two Grades of Work Press Fits For Wheel Hubs The practice of the Boston Elevated Railroad is to allow 8 tons per inch of diameter. An excess of 2 tons total pressure is allowed for cast iron, while the minimum pressure may be from 8 to 13 tons below the normal according to diameter, as shown by the following table. ...
